NYC TAXI ETL DATA PIPELINE

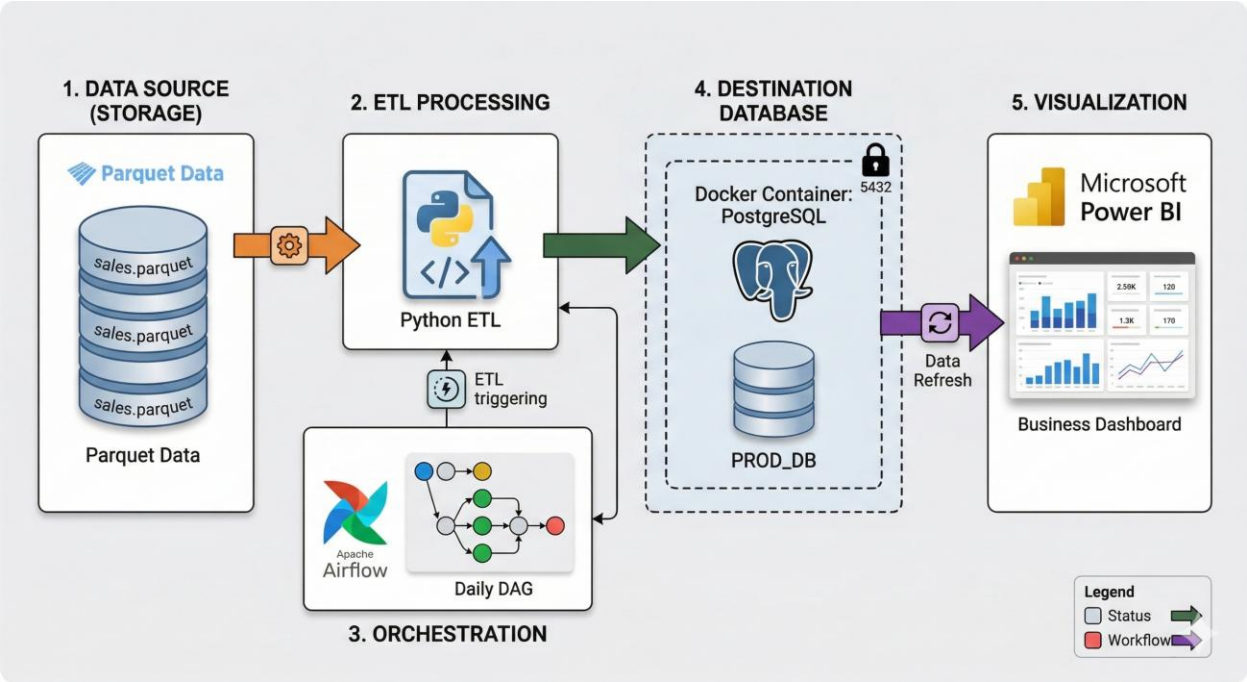
PROJECT OVERVIEW

This project builds an end-to-end data engineering pipeline using NYC Taxi trip data.

The pipeline performs:

- Data extraction from Parquet dataset
- Data transformation using Python and Pandas
- Workflow orchestration using Apache Airflow
- Containerized deployment using Docker
- Data storage in PostgreSQL
- Visualization using Power BI

ARCHITECTURE DIAGRAM :



TECH STACK :

Python

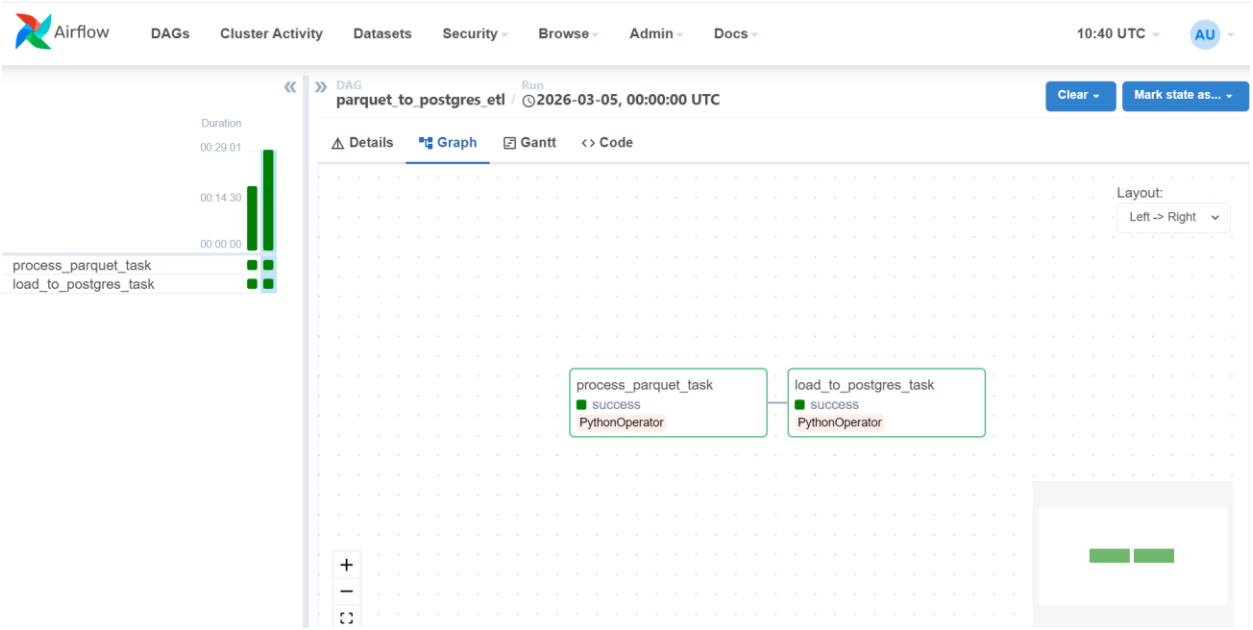
Apache Airflow

Docker

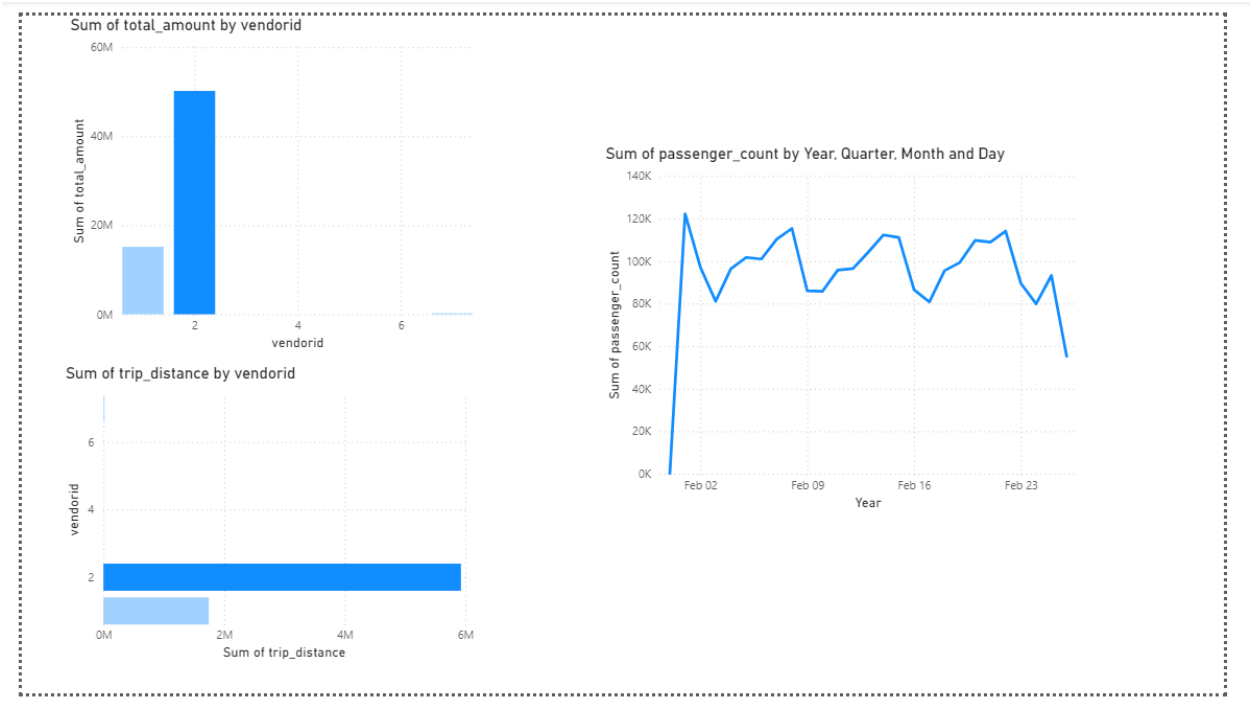
PostgreSQL

Power BI

AIRFLOW PIPELINE :



POWER BI DASHBOARD :



FEATURES :

Automated ETL pipeline

Dockerized environment

PostgreSQL data warehouse

Interactive Power BI dashboard

HOW TO RUN :-

1. Clone repo

2. Run docker containers

3. Open Airflow

4. Run DAG

5. Connect Power BI to PostgreSQL :

localhost:5433
database: airflow
